Recruit Release Notes Changes Launching 2018-05-30

Panorama

Capping off the Panorama project is the **discovered candidate history** feature. When creating a waiver or exemption request, it is helpful to know the candidate's history in order to ensure the waiver or exemption is compliant. With the recent addition of an email field for candidates, users will now be able to **view a list of all recruitments, waivers, and exemptions associated to the candidate**. Users can also manually add historical data through the added history feature.

Panorama Project Videos

As the Panorama project draws to a close, we'd like to offer two short training videos covering all the related features. You'll find these videos under the training menu on the Recruit project page. Feel free to use them as resources for your training and/or provide the link to your users.

"Filters, Columns, and Sorting" (mp4 file, 5:28) This is a soup-to-nuts video of how to work with the vast information laid out in "grids," found on various pages in Recruit.

"Custom Workspaces" (mp4 file, 5:31) For power-user report builders. Learn more about customizing your workspaces for trend analysis and longitudinal studies.

Recruitments

Central AP Analysts need to view lots of historical information in the application, but unfortunately they did not have permissions to view this information. After having consulted with the campuses, we granted Central AP Analysts **read-only access to concluded and inactive recruitments, active and concluded waivers, and active and concluded exemptions**.

Bugs 'n stuff

- Clarified the hover tip on the References column of the applicants grid
- Log reference information when reporting exceptions to developers
- Fixed an issue where a waiver with no candidate name was causing an error
- Fixed an issue where an artifact appears on screen when attempting to print a page
- Fixed a navigation issue with the workspace ribbon and the basic qualifications filter
